

Executive Summary

CMGCoin was developed as a great idea, linking a functional system and an ecosystem with a blockchain-based utility token, so that end users can operate in a safe and uncomplicated environment, meeting the different needs they may have.

The core of CMGCoin is CRYPTO MINING GROUP, which is the parent project of CMGCoin. The two projects together constitute an ecosystem that completely changes the cryptocurrency investment paradigm.

CRYPTO MINING GROUP is a platform that unites in the same place 5 different, but intertwined, ways to win with cryptocurrencies.

CMGCoin is integrated into CRYPTO MINING GROUP as an exchange currency to pay for the platform's premium services since in the world of cryptocurrencies there was a gap in this regard. Thus was born CMGCoin, to offer a platform of collections and payments in the ecosystem of online services.

What is the nature of your profession or the type of experience you have in Crypto?, related activities in the past. The platform provides leverage to generate revenue to each user regardless of their experience.

CMGCoin and CRYPTO MINING GROUP grant the user with mining PoS and Master Nodes. This is a more lucrative and environmentally friendly opportunity, in addition to providing cheaper and safer transactions.

CMGCoin (CMG)

Blockchain-based projects that are backed by their own cryptocurrency, have been the revival of recent times. This new opportunity brought together many projects, and in recent years the crypto space was flooded with the entry of a considerable amount of cryptocurrencies.

Fortunately, competition remains relatively low among important projects with real-world use cases.

HOW WAS CMGCoin CREATED?

CMGCoin is a fork of a cryptocurrency called PIVX which in turn is a fork of DASH. We are inspired by the best of both technologies and select part of the algorithm of the two resulting in a totally improved technology. CMGCoin mine from its own algorithm.

We modify the payment model of the Master Node, increasing its efficiency.

WHAT DOES CMGCoin HAVE TO OFFER?

We understand the potential that the cryptocurrency industry has, as well as the risks associated with the investment. Then we decided to create a cryptocurrency, where interested people can invest with the lowest possible risks.

More importantly, a cryptocurrency that has a real utility beyond artificial speculation, thus with a wide usability that can be converted into a growth channel.

All this resulted in CMGCoin, which creates a perfect balance between potential profit and real profit.

While we developed the cryptocurrency, the main focus was on the utility. CMGCoin expects to be different by relying on its own main network, to ensure the security and scalability of the platform in the most efficient way.

UTILITY OF CMGCoin

CMGCoin has its own payment platform that can be easily integrated, so it is the ideal currency to use on the Internet as a means of payment on any online platform. If to all this we add fast transactions, security in the transactions, anonymity, etc. We find the ideal currency.

We also have to take into account the associated services offered through CRYPTO MINING GROUP, the mother platform of CMGCoin, Mining PoS, Master Nodes working together to multiply profits and a multilevel system that is undoubtedly unique in the crypto world.

Why is CMGCoin different?

MASTER NODE

CMGCoin is a modified and improved successor to the old blockchain system used by Bitcoin, which rewards its users for PoW mining, but users who maintain the Bitcoin network with Nodes do not receive any reward for it.

Later DASH fork BITCOIN, being one of the first cryptocurrencies to add Master Node to its blockchain. CMGCoin maintains the basis of BITCOIN but improving in the aspects where it fails.

PoS VS PoW

PoS mining apart from being more energy efficient than PoW mining, also with PoS mining we support the blockchain and the cryptocurrency network making it more solid.

CMGCoin has a hybrid algorithm, but PoW mining is only used in the pre-milling phase, offering the end user PoS mining, much more efficient and more profitable.

ASSOCIATED SERVICES

CMGCoin has associated services through its mother project CRYPTO MINING GROUP, which in itself alone will add value to it that most cryptocurrencies do not have.

Mining services, Master Node, arbitration and trading. They make CMGCoin a stable project over time.

**** All of these features are explained with details in this Whitepaper.

Technical Characteristics

Currency name:	CMGCoin
Nomenclature:	CMG
Total number of coins:	Unlimited
Total number of pre-mined coins:	11,000,000
Initial phase:	4,200,000
PoW phase:	6,800,000
Total number of coins in PoS phase:	Unlimited
Number of coins to mount an MN:	1,000
Number of confirmations to mount an MN:	15
Reward per PoW block:	680
Mining:	68
Master Node:	612
Reward per PoS block:	50
Mining:	5
Master Node:	45
Super block reward:	1%
Number of confirmations for reward:	21
Number of confirmations for transaction:	6
Difficulty reset:	50%

Associated Services

PoS MINING

CMGCoin has through its mother platform, PoS Pool. Where we will have our own CMGCoin wallet and where we will make a profit with PoS group mining just by having our coins in the wallet.

In the PoS Pool we can withdraw our profits and our capital whenever we want and there is no minimum investment to start generating profits with the PoS Mining.

VIRTUAL MASTER NODE

With the Virtual Master Node of CRYPTO MINING GROUP, CMGCoin's mother project, you can invest in VMN with your CMGCoin, without worrying about anything, they take care of everything from CRYPTO MINING GROUP.

How does the Virtual Master Node work? Master Node are created and you can invest in them with the participation you want. Each Master Node is divided into 100 participations and we can invest from 1 participation to 100.

The returns generated by the VMN are accumulating in our CMGCoin wallet in CRYPTO MINING GROUP. This is very interesting, because there is a win-win effect, since those coins that are accumulating from the wits of the VMNs begin to generate more coins with the PoS Pool so the profits are multiplied without the user has to do anything.

The VMNs will be generating us for 3 months, once the term has elapsed, we can renew or withdraw our capital to our wallet in CRYPTO MINING GROUP, so that they generate us in the PoS Pool or to use them.

We will also have the possibility of assembling our own Master Node on our own.

PREMIUM SERVICES

CMGCoin is a cryptocurrency designed as a means of payment for online services, and the first platform that has it integrated as a means of payment is CRYPTO MINING GROUP.

With CMGCoin in CRYPTO MINING GROUP we will be able to access the platform's premium services, through the payment of the premium membership, which are arbitration and cryptocurrency trading, two services with which to achieve great profits.

Likewise, more platforms will be added where we can use our CMGCoin, with our exclusive payment platform that we have designed for this purpose.

Integrate CMGCoin into my Online Platform

CMGCoin has been designed to be used as a secure payment method in online platforms, we will create a large network of platforms that use our cryptocurrency for their services and thus have a massive utility, reaching great value in the market.

The platforms that join the CMGCoin payment network will have great advantages when using our cryptocurrency as a means of payment. Apart from using a technology such as fast, secure and anonymous transactions. What offers to the platforms that join a plus of competitiveness and great advantage over their competition.

We have created an exclusive payment platform, with cutting-edge technology, to be able to integrate it into the platforms that wish to join the project.

To request to join the project and use CMGCoin on your online platform, you must send an E-MAIL to info@cmgcoin.io requesting information, our technicians will contact you to inform about the characteristics and start the integration process if requested.

Presale Phase

OBJECTIVE

The objective of the pre-sale phase is to first publicize our project and begin to give utility to our cryptocurrency.

We also get income to finance our CMGCoin project and the CRYPTO MINING GROUP mother platform. That although the projects are already well advanced, we still have things to implement in order to give the best user experience to our customers.

On the part of the investors who help us in this phase, they will obtain great profits when buying in this phase, since once CMGCoin leaves the market, immediately after the presale phase, they will have a great gain with respect to the purchase value and you will see how the currency is rapidly revalued by the great value that our cryptocurrency brings.

DURATION

The duration of the Presale period will be exactly 3 months, from September 8, 2019 until December 8, 2019. After this period, CMGCoin sales will not be offered again with advantageous discounts on the market price.

WHAT ARE THE FUNDS COLLECTED TO BE DESTINED?

The funds raised in the pre-sale phase will be used by the CMGCoin project, CRYPTO MINING GROUP and for the constitution of the company that will host both projects.

CMGCoin:

Improve the payment and integration platform in continuous development.

Launch in the best Exchanges.

Search for new platforms to implement CMGCoin.

CRYPTO MINING GROUP:

Platform improvements.

Development of premium services (arbitration and cryptocurrency trading).

Apart from all this, 1% of all the benefits generated for life will be allocated to the social work of CMGCoin.

At the end of the pre-sale phase the NGO to which these funds will go will be announced and the first contribution will be made with the proceeds up to that moment, then a contribution will be made with the corresponding annually.

ADVANTAGES OF BUYING IN THE PRE-SALE PHASE

Buying in the Presale phase has great advantages with discounts of up to 40% of the market price. The market price is expected to rise with respect to the starting price that, together with the discounts for pre-purchase purchases, makes this a unique opportunity to take a great advantage in the CMGCoin project.

Road Map
